

# Quonset Setup - Troop 584

## Winter Set-up

- ① Lay tarp out where you want it. The tarp is rectangular and the stakes go on the short sides for winter use.

- ② Fold tarp in half with brown side out (for winter)

- ③ Pound stakes in to match grommets on upper side

- ④ Flip folded tarp over to set second line of stakes (grommets do not exactly match)

- ⑤ To determine width between stake lines, use solid end-piece

Again match stakes to grommets on upper brown side.

- ⑥ Assemble and install conduit on stakes.

- ⑦ Put tarp over conduit and bungee to poles/stakes near ground.

- ⑧ Install end guy-lines

- ⑨ Bungee on end pieces. - Stay warm

For Summer use, do the same fold and flip over thing on the long side. The width between stake rows is not as critical. Recommend the silver side out for summer, will still need the end guy-lines but not the end tarp pieces.
